GSM PC Access Control

The ECA-Gate GSM Access Control system is our comprehensive and professional GSM access control system that allows you to log on to the GSM unit on site from anywhere and wirelessly, by using your PC (computer) and do whatever you expect from a super professional access control system.

For example:

- To create "time zone" for each user, for example, entry is allowed for user #1 from 5:30PM till 8:00PM on Mondays and Fridays only.
- To get a full report for the last 5 months who came in and which day and what time.
- To create a "one day " pass for visitors, say on Monday 2nd on August
- To allow only one time access for a visitor
- And much much more...
