Programming of BFT Mitto Remote Controls Using an Existing Remote

1. Take both existing and new remotes out to gate. You must be near the installation

2. Using the existing remote which has already been programmed to the gate.
   Hold the 2 buttons on front of remote down together for 2 seconds (red light will come on) and release. (Top buttons if more than 2 buttons).

3. Then using the same remote, hold the 1 button that opens your gate for 2 seconds, (red light will come on) and release. **(Gate should not move)**

4. Using the new remote, hold the 2 buttons on front of remote down together for 2 seconds (red light will come on) and release. (Top buttons if more than 2 buttons).

5. Then using the same new remote hold down the button that you would like to use to open the gate for 2 seconds and release.

6. Wait 10 Seconds so that remotes will be released from programming mode.

7. New remote should now be programmed.

8. Follow these instructions for each gate/roller door you wish to program.

PLEASE NOTE: Some older Mitto remotes have a hidden button (a small pin hole on back of remote) which you need to press with a pin instead of the 2 buttons on the front.

Please note if this does not work please contact us and we will organise at the price of a service call for our technician to come and program them.
